New API gives ICHRA platforms visibility into ACA policy status, improving compliance, reducing risk, and enabling scale

SACRAMENTO, Calif., Aug. 5, 2025 /PRNewswire/ -- HealthSherpa, the leading infrastructure provider for ICHRA enablement, announced today the launch of its new **Policy Status API** — the first solution of its kind to provide monitoring of individual ACA policy.

As Individual Coverage HRAs (ICHRAs) continue to gain traction among employers, ICHRA platforms face growing operational and compliance complexity. A persistent challenge: tracking whether an individual policy has been effectuated, cancelled, or terminated — especially across fragmented exchanges and carrier networks.

HealthSherpa, the leading infrastructure provider for ICHRA, announced the launch of its new Policy Status API.

✕ [Post this](#)

HealthSherpa's new **Policy Status API** solves this by giving ICHRA platforms programmatic updates on a member's policy status. With this capability, platforms can:

- Confirm enrollments automatically, without logging into broker portals
- Detect cancellations and terminations before they create compliance risk
- Eliminate the need for monthly employee attestations

"This API is a game-changer, allowing us to scale more efficiently, keep our clients compliant, and create better employee experiences," said **Richard Perrin**, Chief Technology Officer at **Remodel Health**.

This release expands the growing **ICHRA: Powered by HealthSherpa API library**, which helps carriers and platforms seamlessly integrate and scale ICHRA offerings through a single, unified infrastructure.

"Tracking policy status has been a manual and error-prone process for too long," said **George Kalogeropoulos**, CEO of HealthSherpa. "We built this API to give ICHRA platforms the confidence and clarity they need to scale."

The Policy Status API is available now **at no cost** to all ICHRA platforms.

About HealthSherpa

HealthSherpa is the largest and fastest-growing individual health coverage exchange in the United States, simplifying access to health plans from both federal and state marketplaces. Our secure, integrated technology platform empowers insurance agents, agencies, ICHRA platforms and carriers to quickly and accurately serve and support individuals as they select and use quality, affordable health plans.
